Abstract

We are currently witnessing a major epidemic caused by the 2019 novel coronavirus (2019-nCoV). The evolution of 2019-nCoV remains elusive. We found 4 insertions in the spike glycoprotein (S) which are unique to the 2019-nCoV and are not present in other coronaviruses. Importantly, amino acid residues in all the 4 inserts have identity

MIND THE GAP

A Landscape Analysis of Open Source Publishing Tools and Platforms

"It is imperative that the scholarly publishing community come together to find new ways to fund and incentivize collaboration and adoption if we want these projects to succeed," says Amy Brand, director of the MIT Press, which has published a report on the state of open-source software for publishing.

The MIT Press releases a comprehensive report on open-source publishing software

Report catalogs, analyzes available open-source publishing software; warns open publishing must grapple with siloed development and community-owned ecosystems.

Open Science Badges enhance openness, a core value of scientific practice.

What are Open Science Badges?

- Badges to acknowledge open science practices are incentives for researchers to share data, materials, or to [preregister](#)
- Badges signal to the reader that the content has been made available and certify its accessibility in a persistent location.
- Currently, **67** journals offer Open Science Badges to signal and reward when underlying data, materials, or preregistrations are available, see below.
- See this [Zotero library of over 1,600 published articles](#) with one or more badge.

Badges seem silly. Do they work?

- Yes. Implementing badges is associated with increasing rate of data sharing ([Kidwell et al, 2016](#)), as seeing colleagues practice open science signals that new community norms have arrived.
- For this to occur, badges must be visible on the table of contents and authors must be consistently asked to participate. See the current issue of [Psychological Science](#) for an example of how these new

Intensive serial biomarker profiling for the prediction of neutropenic fever in patients with hematologic malignancies undergoing chemotherapy: a pilot study

Steven M. Chan,¹ John Chadwick,²
Daniel L. Young,³ Elizabeth Holmes,³

Abstract

Neutropenic fever (NF) is a life-threatening complication of myelosuppressive chemotherapy in patients with hematologic malignancies and triggers the administration of broad-spectrum antimicrobials. The ability to accurately predict NF would permit initiation of

high risk of developing neutropenic fever (NF) due to the prolonged duration of severe neutropenia. In the majority of these cases, the rapid administration of broad spectrum antimicrobials decreases the risk of progression to septic shock and death. Despite advances in antimicrobial therapy and supportive care measures, infection-related complications frequently prolong the duration of hospitalization and continue to be the main causes of early mortality in patients undergoing chemotherapy for acute leukemias.^{1,2} Strategies to further decrease these complications are needed to improve patient outcomes.

The initiation of broad-spectrum antimicrobials for NF generally occurs at the time of fever. Although most patients stabilize after starting treatment, a subgroup of patients deteriorates rapidly into septic shock despite prompt initiation of antimicrobials. A strategy to improve outcomes is the use of antibiotic prophylaxis which has been shown to reduce infection-related mortality, especially with the use of fluoroquinolones.³ However, antibiotic resistance, fungal overgrowth, and antibiotic-related adverse effects (*e.g. Clostridium difficile* colitis and allergic responses) have limited the routine use of antibiotic prophylaxis. An alternative strategy is to initiate antimicrobial therapy just prior to the onset of fever. This

**TOWARDS A
SCHOLARLY
COMMONS**

Toward a Scholarly Commons

*Technology companies develop proprietary knowledge networks as key business technologies today. However, because these networks are proprietary and expensive to construct, government, academia, small businesses, and nonprofits do not have access to them. In contrast, **an open knowledge network (OKN)** would be available to all stakeholders, including the researchers who will help push this technology further. An OKN requires a nonproprietary, public-private development effort that spans the entire data science community and will result in an open, shared infrastructure.*

OPEN KNOWLEDGE NETWORK

Who's doing RoR?

Leaky Data and Leadership

Christine L. Borgman, Distinguished Research Professor, UCLA
Amy Brand, Director, MIT Press

Project proposal for UCLA Institutional Review Board, Request for Exemption, Category 1

This unfunded project consists of interviewing ten to 12 university leaders in North America about data governance policy and practice. The product of this research will be a short article (2000 to 5000 words) to be submitted to the Chronicle of Higher Education or The Times Higher Education Supplement as an editorial.

Problem statement:

As universities recognize the vast value inherent in research communications, they are also realizing how little control they have over those data. Scholarly publishing has been outsourced to commercial publishers, academic personnel systems to commercial entities, and so many more: course management, library catalogs, content management and archiving, data warehousing, and on and on.

These data are necessary to the function of individual units, but are of greatest value when aggregated for an integrated view of university research, teaching, and operations (Borgman, 2018). However, universities – like so many other institutions – are losing local control of their infrastructures. The leaky data problem in universities is at least two-fold: (1) Data are being acquired and managed in siloed systems under the control of vertical managers, and (2) these services are being outsourced to commercial entities, often run on proprietary systems with proprietary data structures.

[Home](#) / [News](#) / The MIT Press Receives Grant From The Arcadia Fund To Develop And Pilot A Sustainable Framework For Open Access Monographs

42nd
ANNUAL
MEETING

Rethink, Reimagine & Revolutionize:
THE FUTURE OF SCHOLARLY COMMUNICATION

The MIT Press receives grant from the Arcadia Fund to develop and pilot a sustainable framework for open access monographs - October 4, 2019

The MIT Press has received a three-year \$650,000 grant from Arcadia, a charitable fund of Lisbet Rausing and Peter Baldwin, to perform a broad-based monograph publishing cost analysis and to develop and openly disseminate a durable financial framework and business plan for open access (OA) monographs. The Press, a leader in OA publishing for almost 25 years, will also undertake a pilot program to implement the resulting framework for scholarly front and backlist titles.

Amy Brand, director of the MIT Press and principal investigator for the grant, sees it as an opportunity to explore alternatives to the traditional market-based business model for professional and scholarly monographs.

MIT Open Publishing Services

[HOME](#)

There are roughly 150 university presses worldwide, and many of them now provide services to the academic community, local and extended, that go well beyond traditional publication of scholarly books and journals. The MIT Press has been defining and promulgating services model for nearly 30 years. It was directly involved in prototyping the OpenCourseWare model and went on to produce domain-specific scholarly communities in brain and cognitive sciences and in architecture. These content-rich sites were inspired by our abiding relationships with faculty and researchers here at MIT, and at research institutions worldwide.

MIT Open Publishing Services (or MITops) is a new operating division of the MIT Press with an advisory board of MIT faculty and administrators comprised of representatives from MIT's five school as well as the MIT Libraries, MIT Open Learning, and 3 scholarly communications experts from outside of MIT. MITops will provide and actively market à la carte "white label" publishing services to members of the MIT community as well as outside partners.

Abstract

Chromosome segregation in eukaryotes is driven by the kinetochore, a macromolecular protein complex that assembles onto centromeric DNA and binds spindle microtubules. Cells must tightly control the number and position of kinetochores so that all chromosomes assemble a single kinetochore. A central player in this process is the centromere-specific histone H3 variant CENP-A,

COMMENT

Writing

Study
conception

Credit where credit is due

Liz Allen, Amy Brand, Jo Scott, Micah Altman and Marjorie Hlava are trialling digital taxonomies to help researchers to identify their contributions to collaborative projects.

Investigation

Formal
analysis

Research today is rarely a one-person job. Original research papers with a single author are — particularly in the life sciences — a vanishing breed. Partly, the inflation of author numbers on papers has

Through the endorsement of individuals' contributions, researchers can start to move beyond 'authorship' as the dominant measure of esteem. For funding agencies, better information about the contributions of grant applicants would aid the decision-making

journal articles could be classified using a 14-role taxonomy (see 'Who did what?'). The survey was sent to 1,200 corresponding authors of work published in PLOS journals, Nature Publishing Group journals, Elsevier journals, Science and eLife. Corresponding authors were asked to indicate the contribu-

THE AUTHOR LIST: GIVING CREDIT WHERE CREDIT IS DUE

The first author

Senior grad student on the project. Made the figures.

The third author

First year student who actually did the experiments, performed the analysis and wrote the whole paper. Thinks being third author is "fair".

The second-to-last author

Ambitious assistant professor or post-doc who instigated the paper.

Michaels, C., Lee, E. F., Sap, P. S., Nichols, S. T., Oliveira, L., Smith, B. S.

The second author

Grad student in the lab that has nothing to do with this project, but was included because he/she hung around the group meetings (usually for the food).

The middle authors

Author names nobody really reads. Reserved for undergrads and technical staff.

The last author

The head honcho. Hasn't even read the paper but, hey, he got the funding, and his famous name will get the paper accepted.

Author Contributions

The contributions of all authors must be described. PLOS has adopted the CRediT Taxonomy to describe each author's individual contributions to the work. The submitting author is responsible for providing the contributions of all authors at submission. We expect that all authors will have reviewed, discussed, and agreed to their individual contributions ahead of this time. Contributions will be published with the final article, and they should accurately reflect contributions to the work.

Contributor Role	Role Definition
Conceptualization	Ideas; formulation or evolution of overarching research goals and aims.
Data Curation	Management activities to annotate (produce metadata), scrub data and maintain research data (including software code, where it is necessary for interpreting the data itself) for initial use and later reuse.
Formal Analysis	Application of statistical, mathematical, computational, or other formal techniques to analyze or synthesize study data.
Funding Acquisition	Acquisition of the financial support for the project leading to this publication.
Investigation	Conducting a research and investigation process, specifically performing the experiments, or data/evidence collection.
Methodology	Development or design of methodology; creation of models
Project Administration	Management and coordination responsibility for the research activity planning and execution.
Resources	Provision of study materials, reagents, materials, patients, laboratory samples, animals, instrumentation, computing resources, or other analysis tools.
Software	Programming, software development; designing computer programs; implementation of the computer code and supporting algorithms; testing of existing code components.
Supervision	Oversight and leadership responsibility for the research activity planning and execution, including mentorship external to the core team.
Validation	Verification, whether as a part of the activity or separate, of the overall replication/reproducibility of results/experiments and other research outputs.
Visualization	Preparation, creation and/or presentation of the published work, specifically visualization/data presentation.
Writing – Original Draft Preparation	Creation and/or presentation of the published work, specifically writing the initial draft (including substantive translation).
Writing – Review & Editing	Preparation, creation and/or presentation of the published work by those from the original research group, specifically critical review, commentary or revision – including pre- or post-publication stages.

Harvard Faculty Adopts Open-Access Requirement

FEBRUARY 12, 2008

Harvard University's Faculty of Arts and Sciences adopted a policy this evening that requires faculty members to allow the university to make their scholarly articles available free online.

Peter Suber, an open-access activist with Public Knowledge, a nonprofit group in Washington, said on his [blog](#) that the new policy makes Harvard the first university in the United States to mandate open access to its faculty members' research publications.

Stuart M. Shieber, a professor of computer science at Harvard who proposed the new policy, said after the vote in a news release that the decision "should be a very powerful message to the academic community that we want and should have more control over how our work is used and disseminated."

Neoliberalism

From Wikipedia, the free encyclopedia

For the school of international relations, see [Neoliberalism \(international relations\)](#).

Neoliberalism or **neo-liberalism**^[1] is the 20th-century resurgence of 19th-century ideas associated with *laissez-faire* economic liberalism and free market capitalism,^{[2]:7[3]} which constituted a paradigm shift away from the post-war Keynesian consensus that had lasted from 1945 to 1980.^{[4][5]} Neoliberalism is generally associated with policies of economic liberalization, including privatization, deregulation, globalization, free trade, austerity,^[6] and reductions in government spending in order to increase the role of the private sector in the economy and society.^[14] However, the defining
